

WHEN THE GOING GETS TOUGH...

CALL THE DURA-BASE® MAT EXPERTS

HIGH ARCTIC ENERGY SERVICES is the authorised distributor for **DURA-BASE®** Composite Mat Systems. With a proven track record of supplying mats on long and short term rental to major oil companies, we have the expertise to get the job done. Our mats provide a durable, environmentally safe and cost-effective surface for year-round, all-weather performance.

DURA-BASE® Composite Mat Systems are made of high density poly-ethylene (HDPE) with a strong, durable, uniform surface. The mats are designed for challenging environments and are suitable for a wide range of uses where access, ground protection and a solid base is required for heavy equipment, drilling locations, heli pads, temporary roads, wharfs, camps and pipeline access routes.

DURA-BASE® Mats are engineered for performance and strength with an interlocking system that allows for flexible configurations and distributes weight across a large surface area. The non-skid tread pattern improves safety and traction for load-bearing vehicles, while the interlocking system reduces the chance for drift and slippage.
